

ACE Controls Introduces New Shock for PET Machines

Farmington Hills, MI – September, 2015 – Ace Controls has introduced a new shock specifically designed for PET bottle blowers. These all new shocks allow you to optimize your blower for faster speeds and higher temps while providing longer intervals between shock maintenance.

These **MAXIMACE PET27M** features several technical improvements that contribute to their longer life and faster speeds:

- Innovative 7000 series aluminum outer tube for improved heat dissipation.
- Larger oil reservoir for improved heat dissipation and longer life.
- Newly designed seals and accumulators deliver superior performance and longer life at higher temperature and operating speeds.

Engineered to optimize PET blowers from the two major manufacturers, PET27M is duty rated for over 20 Million cycles. These units have special features such as color coding by application and female hex ends to reduce install/remove times.

Ace Control's created an easy-to-use guide or our application engineers spec shocks on behalf of customers for optimum operation. For more information, visit www.acecontrols.com or download the [MAXIMACE Flyer](#).

About ACE Controls:

With a commitment to innovation and development for over 50 years, ACE Controls Inc. provides high quality industrial motion and vibration control technology with expanded distribution and supply networks. We offer a wide range of products including industrial and safety shock absorbers, hydraulic dampers, feed controls and gas springs. Based in Farmington Hills, MI, ACE's reach expands to more than 120 stocking distributors in 45 countries.
